EMR Solutions

Electronic Medical Records &
Clinic Management System

EMR Solutions

Open-Source Electronic Medical Records and Clinic Management System

OpenEMR is an open-source system designed for electronic medical records (EMR) and clinic management.

Why EMR?

At EMR solution, we provide a powerful, flexible, and fully-featured electronic medical record platform tailored for modern healthcare providers.

Our solution is designed to streamline operations, improve patient care, and support clinics, hospitals, and healthcare institutions of all sizes.

With a focus on adaptability and security, EMR solution is trusted by professionals worldwide to manage clinical workflows, administrative tasks, and medical data efficiently.

Key Features:

EMR Management

Efficiently document, store, and manage comprehensive patient information with customizable templates and a user-friendly charting system.

Appointments Scheduling

Easily organize calendars across multiple locations with easy appointment scheduling and automated appointment reminders via SMS.

E-Prescribing

Send prescriptions electronically to pharmacies while checking for drug interactions, allergies, and controlled substance compliance.

Comprehensive Patient Dashboard

Store and manage patient demographics, medical history, allergies, immunizations, and more — all in one place.

Key Features:

Patient Engagement

Enhance the patient experience with secure messaging, online access to health records, and self-service appointment tools through a dedicated portal.

Practice, Billing & Insurance Management

Streamline administrative workflows with robust tools for electronic billing, insurance claim processing, and financial operations.

The system integrates seamlessly with insurance platforms and supports standard CPT, ICD, and HCPCS codes to ensure accurate and efficient medical billing.

Reporting & Analytics

Generate real-time insights with customizable reports that support clinical, operational, financial, and regulatory performance tracking.

Multi-Clinic & Multi-User Support

Supports multiple locations and users with role-based access control for optimal data security.

Why Choose EMR Solution?

Multilingual Interface

Available in over 30 languages and customizable to add more, the system supports and multicultural patient populations, ensuring inclusive and accessible user experiences.

Ability to Customize

The system supports customized options through a wide range of options such as lists, medical forms, user preferences, screens, and menus.

Community-Supported & Continuously

Backed by a global community of healthcare professionals and developers.

Security & Compliance (HIPAA-Compliant)

Built with industry-standard security protocols, the system ensures patient data confidentiality and integrity through HIPAA-compliant encryption, detailed audit trails, and role-based access control for all users.

Why Choose EMR Solution?

Cloud-Ready & On-Premise Options

Choose the deployment that fits your IT infrastructure.

Integrability

The system could be integrated with other systems such as labs, pharmacies, and other healthcare systems support through HL7, FHIR, and standard health data exchange protocols.

Resource & User Management

The system allows multiple user roles, such as physicians, nurses, and administrative staff, with defined permissions. It also tracks user activity to ensure transparency and accountability.
