PowerBilling & Revenue Collection - PBRC

PowerBilling & Revenue Collection (PBRC) is an enterprise-level patient billing system specifically designed for the healthcare industry, delivering functionality superior to generic ERP and financial systems. It connects to your existing operational systems, gathering service data to support real-time hospital billing, therefore automating the billing process. PBRC delivers all billing and debtor management functions for patient and sundry debtor requirements, eliminating the need for seperate billing and accounts receivable systems.

PBRC integrates with patient management and clinical systems to generate invoices using local billing rules.

A Proven Solution for Healthcare Billing

If you are losing revenue, encountering payment delay through inefficient and labour-intensive billing systems or struggling to keep up with government policies and public and private health cover options, then you are familiar with the issues associated with billing and revenue collection.

How will PBRC Benefit
my Organisation?

Increase Revenue
PBRC reduces manual processes, minimises rejections and correctly captures and identifies billable services, providing you with multiple opportunities to increase revenues across your organisation.

Reduce Unrecovered Debt
PBRC's centralised billing system (with a single support fee) utilises an extensive array of built-in system checks and automated processes to increase efficiency and reduce labour costs.

Exceed Staff & Patient Satisfaction
One bill and one debt, coupled with better communication (SMS and email) improves patient experience. Improve staff engagement with clearer systems and processes.

Reduce Costs
PBRC's centralised billing system (with a single support fee) utilises an extensive array of built-in system checks and automated processes to increase efficiency and reduce labour costs.

Improve Data Integrity
PBRC utilises tables, rules and automated checking to significantly reduce errors arising from manual data entry.

PBRC Key Features

Accounts Receivable

PBRC enables automatic or manual receipting and debt management on an enterprise-wide basis.

Billing

PBRC automatically calculates charges based on the billing policies of the healthcare facility, and generates invoices for patient treatments.

Electronic Claims

PBRC submits claims and accepts payments electronically, speeding up the billing cycle from weeks to days, significantly improving cash flow.

General Ledger

PBRC applies user-defined mapping rules to assign billing transactions to GL accounts for fast and repeatable results.

Integration

PBRC automatically receives service, encounter and patient data in real time from the healthcare facility's clinical and patient administration feeder systems, as service delivery is recorded.

Reporting

PBRC informs billing and revenue performance through a series of standard reports and client-uploaded Crystal Reports as well as custom reporting for detailed analysis of hospital activities.
