Putting Patient Safety At The Heart Of Your Healthcare System

Health and care organizations across the world are facing the pressure of delivering high-quality, safe and effective care to growing populations, with resources becoming increasingly stretched in an ever-changing regulatory environment.

Radar's award-winning software takes a risk-based approach to managing quality and compliance.

It supports the patient safety agenda and your mission to enhance health and care through comprehensive, innovative and personalised services that promote inclusivity and tolerance.

Putting Patient Safety At The Heart Of Your Healthcare System

Governments

Centralised governance and data aligned with national health agendas

Providers

Visibility of performance (manage patient safety, incidents etc.) and KPI reporting

Healthcare Services

Product Modules

Incident Management

Prevent and manage reoccurrence of incidents through data analysis, reporting and sharing of best practice and lessons learnt.

Risk Management

Proactive risk management helping you create preventative action plans.

Audit Management

Check service compliance against regulatory requirements with audits and self-assessments.

Quality Improvement Plans

Create improvement plans through the linking of audit findings and outcomes ensuring responsibilities are assigned.

Workforce Compliance

Monitor employee competency and compliance to build a highly knowledgeable and skilled workforce.

Quality Performance Tracking

Radar's artificially intelligent analytics help you:

- Monitor behaviour patterns and use this data to create events
- Automate notifications around concerns that need addressing
- Improve operational intelligence across one or multiple organizations
- Improve operational intelligence

Why Choose Radar?

Flexible

Quickly personalize functions to align with your existing processes.

Competitively Priced

Cost-effective software with a licence fee model aligned to your requirements.

Easily demonstrate return on investment

Create operational efficiencies and easily demonstrate return on investment.

Easy to use

Intuitive user experience, consultative onboarding and outstanding product support.

Interoperable

Connect to multiple systems through industry-standard APIs.

Trusted solution

Specifically designed for healthcare with over 6,000 active locations around the world.

Reference

The United Arab Emirate's Ministry of Health & Prevention - MOHAP (currently called Emirates Health Services - EHS) has commissioned Radar Healthcare to deliver its quality and compliance software to 17 hospitals and 72 primary care centres across the region.

The system will support them in delivering clinical incident reporting and patient safety outcomes.

"Our key focus is to improve patient safety.

We believe that incident and risk management reporting offered by Radar Healthcare's accredited system and MEMIT'S expertise in delivering cutting-edge solutions, will support us in achieving the safest patient care in the UAE region."
